Professional Summary

Highly motivated and detail-oriented aspiring **AI Engineer** with a strong foundation in Python, machine learning algorithms, and deep learning frameworks. Passionate about building robust Retrieval-Augmented Generation (RAG) pipelines, developing intelligent agentic systems, and optimizing large language models (LLMs). Eager to leverage technical problem-solving capabilities and modern development workflows to engineer scalable, production-ready AI solutions.

Technical Skills

Languages & Tools:	Python, SQL, Git, UV (Package Manager), VS Code, Bash
AI & Machine Learning:	Scikit-Learn, TensorFlow, PyTorch, NumPy, Pandas
Generative AI:	LLMs, Retrieval-Augmented Generation (RAG), NeMo Guardrails, LangChain
Core Concepts:	Vector Databases, Semantic Search, Data Pipelines, Prompt Engineering

Key Projects

Enterprise RAG System Deployment

- Designed and developed a secure enterprise-grade Retrieval-Augmented Generation pipeline using **Python** and modern package environments.
- Implemented conversational safety layers and structured rails to control LLM outputs, utilizing advanced development dependencies.
- Managed complex project dependencies, virtual environments, and reproducible build tracking natively using **UV**.

Intelligent Vector Search Engine

- Constructed high-dimensional semantic indexing matrices for rapid document retrieval across structured and unstructured text databases.
- Optimized backend embedding evaluations to drastically reduce response latencies during system prompts.

Education

Bachelor of Technology (B.Tech) in Computer Science

Graduation Year: 2026

Hobbies & Technical Interests

- **AI Open Source Contribution:** Actively exploring guardrail configurations, vector database indexing methodologies, and emerging developer toolchains (like Astral UV).
- **Technical Writing & Coding Marathons:** Documenting complex software debugging processes and participating in intensive coding sprints for building end-to-end RAG architecture.
- **Strategy Games:** Playing tactical strategy games that sharpen system-level problem-solving and algorithmic thinking patterns.
